

CLAIM AMENDMENTS

1. (Currently Amended) A method for protecting a military or paramilitary firefighter or emergency worker, wherein the method comprises providing the military or paramilitary firefighter or emergency worker with a protective garment, which is a coat, trousers, overalls, or coveralls, which is reversible, which has a shell of high visibility and a shell of low visibility, and which is wearable with either shell facing outwardly, and wherein the shell of high visibility has portions that are reflective, fluorescent, or both, which portions face outwardly when the protective garment is worn so that the shell of high visibility faces outwardly,

wherein, whereby if a tactical situation, in which a need for low visibility overrides a need for high visibility, develops or is expected to develop, the military or paramilitary firefighter or emergency worker wearing the protective garment with the shell of high visibility facing outwardly is motivated ~~may have an opportunity~~ to doff the protective garment, to reverse the protective garment, and to re-don the protective garment with the shell of low visibility facing outwardly.

2. (Original) The method of claim 1 wherein those portions are provided by reflective trim affixed to the shell of high visibility.

3. (Currently Amended) A method for protecting a military or paramilitary firefighter or emergency worker, wherein the method comprises providing the military or paramilitary firefighter or emergency worker with a protective garment, which is a coat, trousers, overalls, or coveralls, which is reversible, which has a shell of high visibility and a shell of low visibility, and which is wearable with

either shell facing outwardly, wherein the shell of high visibility has portions that are reflective, fluorescent, or both, which portions face outwardly when the protective garment is worn so that the shell of high visibility faces outwardly, ~~and~~ wherein, when facing outwardly, the shell of low visibility appears dark in ambient light,

wherein, ~~whereby~~ if a tactical situation, in which a need for low visibility overrides a need for high visibility, develops or is expected to develop, the military or paramilitary firefighter or emergency worker wearing the protective garment with the shell of high visibility facing outwardly is motivated ~~may have an opportunity~~ to doff the protective garment, to reverse the protective garment, and to re-don the protective garment with the shell of low visibility facing outwardly.

4. (Currently Amended) A method for protecting a military or paramilitary firefighter or emergency worker, wherein the method comprises providing the military or paramilitary firefighter or emergency worker with a protective garment, which is a coat, trousers, overalls, or coveralls, which is reversible, which has a shell of high visibility and a shell of low visibility, and which is wearable with either shell facing outwardly, wherein the shell of high visibility has portions that are reflective, fluorescent, or both, which portions face outwardly when the protective garment is worn so that the shell of high visibility faces outwardly, wherein, when facing outwardly, the shell of low visibility appears black in ambient light,

wherein, whereby if a tactical situation, in which a need for low visibility overrides a need for high visibility, develops or is expected to develop, the military or paramilitary firefighter or emergency worker wearing the protective garment with the shell of high visibility facing outwardly is motivated ~~may have an opportunity~~ to doff the protective garment, to reverse the protective garment, and to re-don the protective garment with the shell of low visibility facing outwardly.

5. Currently Amended) A method for protecting a military or paramilitary firefighter or emergency worker, wherein the method comprises providing the military or paramilitary firefighter or emergency worker with a protective garment, which is a coat, trousers, overalls, or coveralls, which is reversible, which has a shell of high visibility and a shell of low visibility, and which is wearable with either shell facing outwardly, wherein the shell of high visibility has portions that are reflective, fluorescent, or both, which portions face outwardly when the protective garment is worn so that the shell of high visibility faces outwardly, wherein, when facing outwardly, the shell of low visibility displays camouflage,

wherein, whereby if a tactical situation, in which a need for low visibility overrides a need for high visibility, develops or is expected to develop, the military or paramilitary firefighter or emergency worker wearing the protective garment with the shell of high visibility facing outwardly is motivated ~~may have an opportunity~~ to doff the protective garment, to reverse the protective garment, and to re-don the protective garment with the shell of low visibility facing outwardly.

6. (Cancelled).

7. (Currently Amended) The method of claim 5 6 wherein the shells are similar in basis weights.

8. (Currently Amended) The method of claim 5 6 wherein the shells are equal in basis weights.

9. (Currently Amended) A method for protecting a military or paramilitary firefighter or emergency worker, wherein the method is practiced by the military or paramilitary firefighter or emergency worker and comprises wearing a protective garment, which is a coat, trousers, overalls, or coveralls, which is reversible, which has a shell of high visibility and a shell of low visibility, and which is wearable with either shell facing outwardly, and wherein the shell of high visibility has portions that are reflective, fluorescent, or both, which portions face outwardly when the protective garment is worn so that the shell of high visibility faces outwardly,

wherein, whereby if a tactical situation, in which a need for low visibility overrides a need for high visibility, develops or is expected to develop, the military or paramilitary firefighter or emergency worker wearing the protective garment with the shell of high visibility facing outwardly is motivated ~~may have an opportunity~~ to doff the protective garment, to reverse the protective garment, and to re-don the protective garment with the shell of low visibility facing outwardly.

10. (Original) The method of claim 9 wherein those portions are provided by reflective trim affixed to the shell of high visibility.

11. (Currently Amended) A method for protecting a military or paramilitary firefighter or emergency worker, wherein the method is practiced by the military or paramilitary firefighter or emergency worker and comprises wearing a protective garment, which is a coat, trousers, overalls, or coveralls, which is reversible, which has a shell of high visibility and a shell of low visibility, and which is wearable with either shell facing outwardly, wherein the shell of high visibility has portions that are reflective, fluorescent, or both, which portions face outwardly when the protective garment is worn so that the shell of high visibility faces outwardly, wherein, when facing outwardly, the shell of low visibility appears dark in ambient light,

wherein, whereby if a tactical situation, in which a need for low visibility overrides a need for high visibility, develops or is expected to develop, the military or paramilitary firefighter or emergency worker wearing the protective garment with the shell of high visibility facing outwardly is motivated ~~may have an opportunity~~ to doff the protective garment, to reverse the protective garment, and to re-don the protective garment with the shell of low visibility facing outwardly.

12. (Currently Amended) A method for protecting a military or paramilitary firefighter or emergency worker, wherein the method is practiced by the military or paramilitary firefighter or emergency worker and comprises wearing a protective garment, which is a coat, trousers, overalls, or coveralls, which is reversible, which has a shell of high visibility and a shell of low visibility, and which is wearable with either shell facing outwardly, wherein the

shell of high visibility has portions that are reflective, fluorescent, or both, which portions face outwardly when the protective garment is worn so that the shell of high visibility faces outwardly, wherein, when facing outwardly, the shell of low visibility appears black in ambient light,

wherein, whereby if a tactical situation, in which a need for low visibility overrides a need for high visibility, develops or is expected to develop, the military or paramilitary firefighter or emergency worker wearing the protective garment with the shell of high visibility facing outwardly is motivated ~~may have an opportunity~~ to doff the protective garment, to reverse the protective garment, and to re-don the protective garment with the shell of low visibility facing outwardly.

13. (Currently Amended) A method for protecting a military or paramilitary firefighter or emergency worker, wherein the method is practiced by the military or paramilitary firefighter or emergency worker and comprises wearing a protective garment, which is a coat, trousers, overalls, or coveralls, which is reversible, which has a shell of high visibility and a shell of low visibility, and which is wearable with either shell facing outwardly, wherein the shell of high visibility has portions that are reflective, fluorescent, or both, which portions face outwardly when the protective garment is worn so that the shell of high visibility faces outwardly, wherein, when facing outwardly, the shell of low visibility displays camouflage,

wherein, whereby if a tactical situation, in which a need for low visibility overrides a need for high visibility, develops or is expected to develop, the
